### Making Material Design Android Style Guide

Blog posts. Styles and themes on Android allow you to separate the details of your app design from the UI structure and behavior, similar to stylesheets in web design. A style is a collection of attributes that specify the appearance for a single View . A style can specify attributes such as font color, font size, background color, and much more. A theme is a collection of attributes that's applied to an entire app, activity, or view hierarchy-not just an individual view.

Design for Android. Android users expect your app to look and behave in a way that's consistent with the platform. Not only should you follow material design guidelines for visual and navigation patterns, but you should also follow quality guidelines for compatibility, performance, security, and more. The following links provide everything you need to design a high quality Android app.

### Android Developers

A style resource defines the format and look for a UI. A style can be applied to an individual View (from within a layout file) or to an entire Activity or application (from within the manifest file). For more information about creating and applying styles, please read Styles and Themes .

The HIDL code style resembles C++ code in the Android framework, with 4-space indents and mixed-case filenames. Package declarations, imports, and docstrings are similar to those in Java, with slight modifications. The following examples for IFoo.hal and types.hal illustrate HIDL code styles and provide quick links to details on each style ( IFooClientCallback.hal, IBar.hal, and IBaz.hal have been omitted).
