This open access book focuses on Switzerland-based medium-sized companies with a longstanding export tradition and a proven dominance in global niche markets. Based upon in-depth documentation and analysis of 36 Swiss companies over their entire history, an expert team of authors presents several parallels in the pathways and success factors which allowed these firms to become dominant and operate from a high-cost location such as Switzerland. The book enhances these insights by providing detailed company profiles documenting the company history, development, and how their relevant global niche positions were reached. Readers will benefit from these profiles as they compile a diverse selection of industries, mainly active within the B2B sector, with mostly mature companies (60 years to older than 100 years since founding) and different types of ownership structures including family firms. Masterpieces of Swiss Entrepreneurship brings unique learning opportunities to owners and leaders of SMEs in Switzerland and elsewhere. Findings are based on detailed bottom-up research of 36 companies – without any preconceived notions. The book is both conceptual and practical. It fosters understanding for different choices in development pathways and management practices. Matti Alahuhta, Chairman DevCo Partners, ex-CEO Kone, Board member of several global listed companies, Helsinki, Finland Start-up entrepreneurs need proven models from industry which demonstrate the various paths to success. "Masterpieces of Swiss Entrepreneurship" provides deep insights highlighting these models and the important trade-offs entrepreneurial teams must consider when choosing the path of high growth or of maximum control, as they are often mutually exclusive. Gina Domanig, Managing Partner, Emerald Technology Ventures, Zurich

Accounting Information Systems provides a comprehensive knowledgebase of the systems that generate, evaluate, summarize, and report accounting information. Balancing technical concepts and student comprehension, this textbook introduces only the most-necessary technology in a clear and accessible style. The text focuses on business processes and accounting and IT controls, and includes discussion of relevant aspects of ethics and corporate governance. Reliable real-world examples and abundant end-of-chapter resources reinforce Accounting Information Systems (AIS) concepts and their use in day-to-day operation. Now in its fourth edition, this popular textbook explains IT controls using the AICPA Trust Services Principles framework—a comprehensive yet easy-to-understand framework of IT controls—and allows for incorporating hands-on learning to complement theoretical concepts. A full set of pedagogical features enables students to easily comprehend the material, understand data flow diagrams and document flowcharts, discuss case studies and examples, and successfully answer end-of-chapter questions. The book's focus on ease of use, and its straightforward presentation of business processes and related controls, make it an ideal primary text for business or accounting students in AIS courses.

Discusses the American dependence on imported fossil fuel and proposes a solution in the form of biodiesel engines.

Recommended by the medical profession worldwide, this revolutionary stand allows everyone to have hands-free reading anywhere and at any time, enabling perfect posture while working at a desk, cooking, studying or sitting up in bed. READEZY has ultimate stability and can sensibly fold flat into a neat and compact package. No more awkward positions, eyestrain, tired arms or neck and back pain.

He consider a cone dominance problem: given a "preference" cone IP and a set $n \times R$ of available, or feasible, alternatives, the problem is to identify the non dominated elements of X. The nonzero elements of IP are assumed to model the dominance structure of the problem so that $y \leq X$ dominates $x \leq X$ if $Y = x + P$ for some nonzero $p \in S$ IP. Consequently, $x \in X$ is nondominated if, and only if, $(\{x\} + IP) \cap X = \{x\}$ (1.1) He will also refer to nondominated points as efficient points (in X with respect to IP) and we will let $EF(X,IP)$ denote the set of such efficient points. This cone dominance problem draws its roots from two separate, but related, origins. The first of these is multi-attribute decision making in which the elements of the set X are endowed with various attributes, each to be maximized or minimized.
