primary muscles used when skiing. Before trying this month's exercises, you might like to check-out last month's ski fitness exercises first. There's a progression with the exercises and some key understanding to gain for how the muscles work when we ski.

How to get fit for skiing - Ski fitness | All Mountain ...

A week of skiing requires a good level of fitness, whether you're a seasoned pro or a mountain newbie. So before heading up to the peaks, try to get in some workouts to get ski-fit – not only will you enjoy the slopes more, but you'll strengthen those key muscles, meaning there'll be less risk of injury.

Get fit for skiing - Ski-Buzz | Paradise doesn't have to ...

Cross training is good for general fitness and helps when the ski season comes. However, sports like running, cycling, swimming and tennis are not on their own, the best preparation for skiing. Sure, these sports can get you fit, but this kind of training won't stop the skiing muscles from burning when you hit the slopes again.

How to get ski fit - ski fitness | All Mountain Performance

When skiing, you're going to need to be able to rely on your muscles - in particular, your quads and glutes. The quadriceps are the muscles at the front of your thighs. They're important for skiing because they're what you'll use to bend your knees.

How to Get Fit for Skiing | Halsbury Ski

These muscles hold you in position as you ski and provide protection for your knees. Great exercises for the quadriceps include squats and lunges." Hamstrings and Glutes: "When skiing downhill, you typically hold your body in a flexed position, which is leaning forward from the hips. This requires great strength from your hamstrings and glutes as they help stabilize your body.
