We study in Part I of this monograph the computational aspect of almost all moduli of continuity over wide classes of functions exploiting some of their convexity properties. To our knowledge it is the first time the entire calculus of moduli of smoothness has been included in a book. We then present numerous applications of Approximation Theory, giving exact values of errors in explicit forms. The K-functional method is systematically avoided since it produces nonexplicit constants. All other related books so far have allocated very little space to the computational aspect of moduli of smoothness. In Part II, we study/examine the Global Smoothness Preservation Property (GSPP) for almost all known linear approximation operators of approximation theory including: trigonometric operators and algebraic interpolation operators of Lagrange, Hermite-Fejer and Shepard type, also operators of stochastic type, convolution type, wavelet type integral operators and singular integral operators, etc. We present also a sufficient general theory for GSPP to hold true. We provide a great variety of applications of GSPP to Approximation Theory and many other fields of mathematics such as Functional analysis, and outside of mathematics, fields such as computer-aided geometric design (CAGD). Most of the time GSPP methods are optimal. Various moduli of smoothness are intensively involved in Part II. Therefore, methods from Part I can be used to calculate exactly the error of global smoothness preservation. It is the first time in the literature that a book has studied GSPP.

Turner's illustrations and Ritchie's text first appeared in slightly different form in 1833, 1834, & 1835 in three volumes that came to be known as Turner's Annual Tours; the plates were reissued in 1837 as Rivers of France; and the first edition of Liber Fluviorum. was published in 1853. In any of these guises the lovely plates confirm Gordon Ray's verdict that "Turner achieved his best landscapes on steel in this

series." [See Ray, The Illustrator and the Book in England., 16.]
