An essential companion for both the aspiring and practising electrophysiologist, The EHRA Book of Pacemaker, ICD and CRT Troubleshooting assists device specialists in tackling both common and unusual situations that that they may encounter during daily practice. Taking a case-based approach, it examines pacemakers, implantable cardioverter defibrillators and cardiac resynchronisation therapy. Much more than just a technical manual of device algorithms, the cases help readers to consolidate their technical knowledge, and improve their reasoning and observation skills so they are able to tackle device troubleshooting with confidence. The 70 cases are arranged in three sections by increasing levels of difficulty to walk readers through all the skills and knowledge they need in an easy to use and structured format. Each case contains a short clinical description and a device tracing followed by a multiple choice question. Answers are supplied with detailed annotations of the tracing and an in-depth discussion of the case, highlighting practical hints and tips as well as providing an overview of the technical function of devices. A useful summary of principal device features and functions is also included. The EHRA Book of Pacemaker, ICD and CRT Troubleshooting is the perfect companion for electrophysiologists, cardiology trainees and technical consultants working with device patients as well as for those studying for the EHRA accreditation exam in cardiac pacing.

The effective treatment of anorexia nervosa (AN) remains a significant challenge. This has prompted new research into ways of engaging and keeping patients in treatment and ultimately achieving better outcomes, not only on a symptomatic level but also in broader aspects of life. In this book Kate Tchanturia brings together international experts from the field of eating disorders to discuss the effectiveness of cognitive remediation therapy for treating anorexia nervosa, and keeping patients in therapy. Cognitive Remediation Therapy (CRT) is a type of therapy that concentrates on improving neurocognitive abilities such as attention, working memory, cognitive flexibility and planning, and executive functioning which leads to improved general functioning. Recent research has demonstrated the effectiveness of the approach for treating those with anorexia nervosa, cognitive improvements have been noted in patients, and the approach is associated with low drop-out rates from the treatment, and high levels of acceptability among both patients and therapists. This book presents research focussing on: - individual therapy with adults - family-based therapy - CRT with young people - group format of CRT - adapting interventions for people with co-morbidities - clinicians experiences working with CRT Illustrated throughout with case studies, and integrating neuropsychological testing and brain imaging this book discusses the latest research on this novel treatment approach. It will be key reading for researchers and academics in the eating disorders field wanting to trial the approach, as well as final year undergraduates and postgraduate clinical psychology students looking for a new perspective.

This book presents a mechanistic approach—mathematical modeling—for carrying out dental materials research. This approach allows researchers to go beyond the null hypothesis and obtain a solution that is more general and therefore predictive for conditions other than those considered in a study. Hence it can be used either on its own or to complement the commonly used statistical approach. Through a series of practical problems with wide-ranging application, the reader will be guided on: How to construct a mathematical model for the behavior of dental materials by making informed assumptions of the physical, chemical, or mechanical situation How to simplify the model by making suitable simplifications How to calibrate the model by calculating the values of key parameters using experimental results How to

refine the model when there are discrepancies between predictions and experiments Only elementary calculus is required to follow the examples and all the problems can be solved by using MS Excel© spreadsheets. This is an ideal book for dental materials researchers without a strong mathematical background who are interested in applying a more mechanistic approach to their research to give deeper insight into the problem at hand. Advance praise for *Mathematical Models for Dental Materials Research*: "This is a nice addition for research students on how to conduct their work and how to manage data analysis. It brings together a number of important aspects of dental materials investigations which has been missing in the literature. The practical examples make it much easier to understand." Michael F. Burrow, Clinical Professor in Prosthodontics, The University of Hong Kong "The great strengths of this volume are the real world examples of dental materials research in the successive chapters. In turn, this is an outcome of the outstanding expertise of both authors. I warmly recommend this book to the dental biomaterials community worldwide." David C. Watts, Professor of Biomaterials Science, University of Manchester, UK

From the author of *The Real History Behind the Templars--the origins and stories behind end-of-the-world predictions throughout history, from Revelations to 2012*. In entertaining and sharp prose, historian Sharan Newman explores theories of world destruction from ancient times up to the present day- theories which reveal as much about human nature as they do about the predominant historical, scientific, and religious beliefs of the time. Readers will find answers to the following end-of-times questions: "Did the Mayans really say the world will end in December 2012?" "How have the signs in the New Testament Book of Revelations been interpreted over the years?" "How did ancient Egyptians, Norse, and Chinese think the world would end?" "When did Nostradamus predict that the last days would come?" "Does the I Ching reference 2012?" "Why didn't the world end in Y2K?" "Are meteors, global warming, super-volcanoes, and the threat of nuclear war signs that the end is near?"
