Your search UI (user-interface) can look however you want as long as there is a place for your user (s) to enter in some text and a search button for them to click. The above image shows how I will typically create my UI. I use a nice clean textbox to hold the search text and flat-styled, rounded rectangle shape for the button.

### How To Create A Filtering Search Box For Your Excel Data ...

The VLOOKUP function in Excel is one of the most useful features Excel provides. The V in VLOOKUP stands for vertical, and the LOOKUP portion represents the function's ability to look up and extract data from another table, based on an associated value. It makes searching and automating the input of data easy and efficient.

### Excel Courses and Training | Learn Excel Online for All ...

In this step we create a form to enter word to search we attach onkeyup event in textbox which calls do\_search() function to get results because we want to get results while pressing key, we give both options to user he will get results by typing a word or by clicking on search button. We create a do\_search() function which do an ajax call to 'get\_results.php' page and get the search results and display in 'result\_div'. You may also like highlight words on search using JavaScript.
