The nomenclature of acids differentiates between oxoacids, in which the H<sup>+</sup> ion is attached to an oxygen atom of a polyatomic ion, and acids in which the H<sup>+</sup> ion is attached to another element. Carboxylic acids are an important class of organic acids. Ammonia is an important base, as are its organic derivatives, the amines.

A delicate balance between between acids and bases is needed for organisms to survive. Even a small increase in acidity harms coral reefs and organisms that require a specific pH level to use calcium to make their shells. p H I N D I C A T O R S Many of the solutions that acids and bases form are clear liquids
